

# Spin 2 and 32

By **Nick Ray Ball** 15<sup>th</sup> September 2021

## SPIN 1 TO 2

To get from Spin 1 to 2, one must near double cash flow, labour, raw materials, components and on and on. Let us say getting the materials and hiring labour was logistically possible, and as we have seen the doubling of cash flow is possible.

To double most avenues to the manufacturing process one needs to build this capacity into the company from the beginning.

Let us use our token building sector manufacturing comply TWF The Window Factory, in 2024 Cash Flow is \$2,776,355, this is the amount of money TWF will receive from companies in the same network and let us say that the average product was \$150, then  $\$2,776,355 / \$150 = 20,000$  products.

So, from the very beginning, if either constructing a company from scratch or partnering with an existing business the capacity in 2024 must be-say one magnitude higher, TWF are capable of creating 200,000 products, if they had the labour cash flow and supplies to do so.

Thus, solving the transition from Spin 1 to Spin 2 because **the original business could easily create 40,000 products in 2025 if it has the cash flow, labour and supplies to do so.**

## SPIN 31 TO 32

"If you are already at Spin 31, then doing it a little bit faster does not make that much difference, it is completely different relative to Spin 1 to 2 which requires a doubling of raw materials, parts, labour, and other expenses. Whereas going from Spin 31 to 32 only increases cash flow (cash needed) by one in 32, it is not doubling its need for labour or raw materials it is only increasing by 1/32."
